

# Validate RIP/ToPX package contents

---

- **Stage:** Transfer
- **Microservice Group:** Verify transfer compliance
- **Job:** Validate RIP/ToPX package contents
- **Input:** SIP package including RIP/ToPX file
- **Output** Success or Fail

## Description

The microservice reads RIP/ToPX File and pulls all files that are described there. Then it checks file existence in the SIP.

In case if some file is missing in the SIP the microservice will return fail result and ingest process will be stopped.
